Appendix A - Map of French Creek Water Local Service Area

Appendix B - Water Quality Testing Results

Appendix C - Emergency Response Plan

## 1. Introduction

The following annual report describes the French Creek Water Local Service Area and summarizes the water quality and production data from 2008. This report also includes a summary of inquiries and complaints, completed and proposed maintenance activities, the Emergency Response Plan, and the Cross Connection Control Program.

This report is to be submitted to the Vancouver Island Health Authority by the Spring of 2009.

## 2. French Creek Water System

The French Creek Water Service Area was established in 1980 and comprises an area west of Drew Road and south of the Island Highway between the City of Parksville and the Town of Qualicum Beach. The water source for the French Creek Water Service Area comes from a series of groundwater wells located within the Sandpiper subdivision. The water supply is chlorinated and stored in one reservoir. A map of the French Creek Water System is provided in Appendix A for reference.

### 2.1 Groundwater Wells

Six groundwater production wells are present in the area.

| Well / Name | Well Depth | In Use | Wellhead Protection | Treated/Untreated with Chlorine |
|-------------|------------|--------|---------------------|---------------------------------|
| #1          | 39.6 m     | No     | Yes                 | n/a                             |
| #2          | 40.5 m     | Yes    | Yes                 | Treated                         |
| #4          | 40.2 m     | Yes    | Yes                 | Treated                         |
| #5          | 50.3 m     | No     | Yes                 | n/a                             |
| #6          | 52.4 m     | No     | Yes                 | n/a                             |
| #7          | 39.6 m     | Yes    | Yes                 | Treated                         |

French Creek Well #1 has not been used for several years due to low production and high iron levels. Well #1 is expected to be converted to a monitoring well in 2009. Wells #5 and #6 are temporarily not in use due to elevated levels of iron and manganese.

### 2.2 Reservoirs

One service reservoir (steel construction) is present at 1225 Sunrise Drive, Parksville, B.C. and has a capacity of 364 m<sup>3</sup> (80,000 imperial gallons).

### 2.3 Distribution System

The water distribution system in French Creek is comprised of 150mm and 200mm asbestos-concrete watermains, and 100mm, 150mm and 200mm PVC watermains. Fire hydrants are located throughout the system.

### 3. Water Sampling and Testing Program

Water sampling and testing is carried out weekly in the distribution system. The following table includes a summary of all testing.

| Timing                                  | Location                  | Tests  |
|---|---------------------------|--|
| Weekly                                  | RDN (in-house) Laboratory | Total coliforms, E.Coli<br>Temperature, pH, Conductivity<br>Chlorine residual, Salinity<br>Total Dissolved Solids<br>Iron, Manganese |
| Weekly<br>(Health Dept.<br>Requirement) | North Island Labs         | Total, Fecal coliforms   |
| Annual Source<br>Water Testing          | North Island Labs         | Complete potability testing<br>of each well  |
| Annual System<br>Water Testing          | North Island Labs         | Complete potability testing<br>of distribution system  |

### 4. Water Quality - Source Water and Distribution System

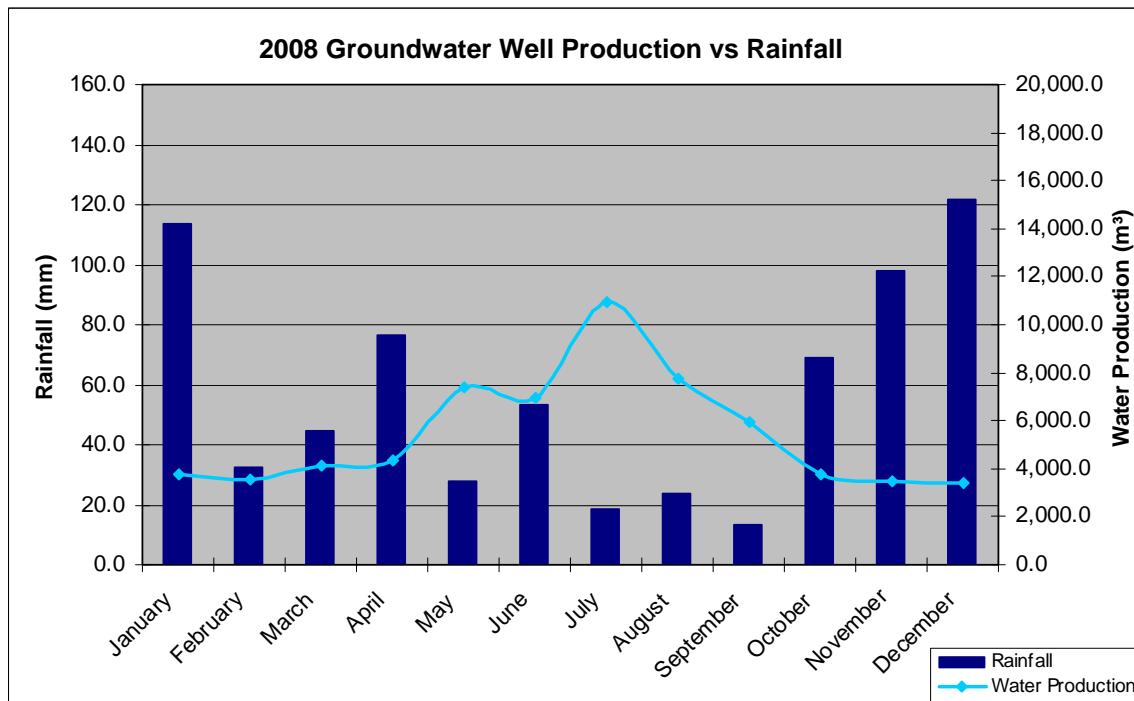

Up-to-date water quality reports and lab data are posted monthly on the RDN website at [www.rdn.bc.ca](http://www.rdn.bc.ca) in the WaterSmart section, under “Communities”. Tables of water quality testing results for both the source water and distribution system are provided at the end of this report under Appendix B.

### 5. Water Quality Inquiries and Complaints

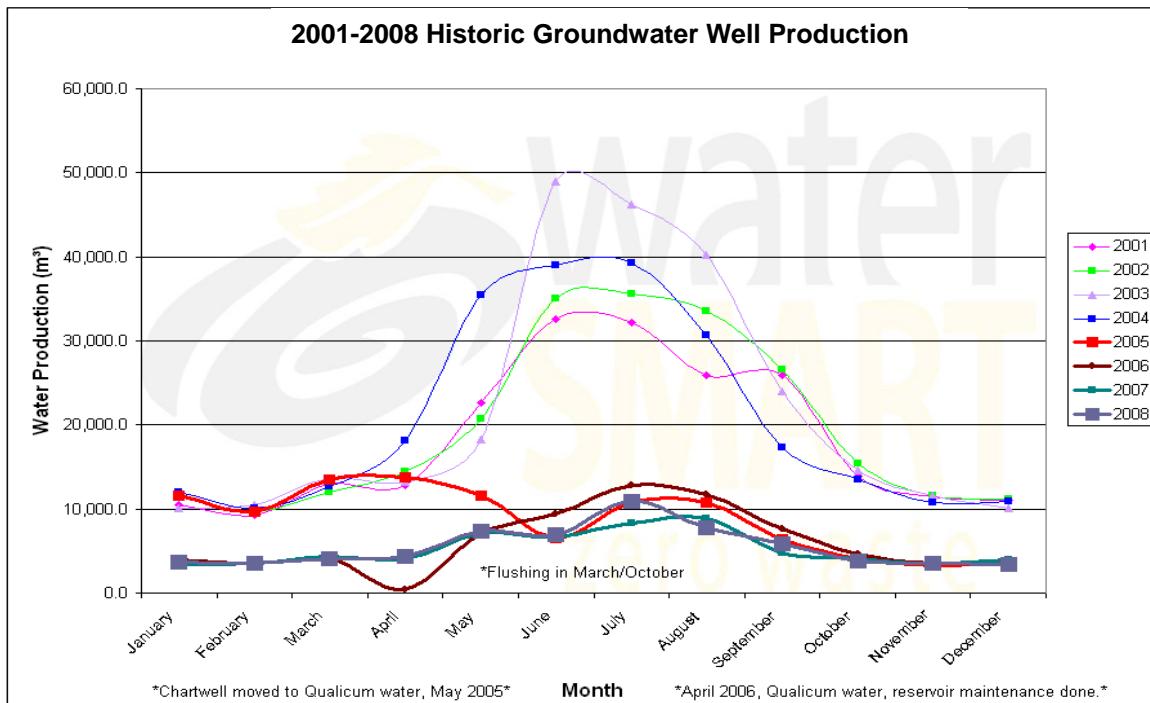

A few complaints and inquiries were received from the French Creek water service area, and were typically related to isolated incidents of iron discolouration in the water.

## 6. Groundwater Production and Consumption

The 2008 monthly groundwater production for French Creek is shown in the chart below. There are 233 water service connections in French Creek. Groundwater production has been charted against rainfall data from the City of Parksville website to show the correlation between rainfall and water consumption.

The monthly groundwater production for French Creek for the past 8 years is shown in the chart below. Groundwater production in 2008 was typically lower than previous years.

### Consumption

In the Fall/Winter of 2008, the average usage per home in French Creek was 0.53 cubic metres per day (116 imperial gallons). In the summer, the average water usage was 1.07 cubic metres per day (235 imperial gallons). Based on these figures, the annual consumption per capita is estimated to be 303 L/day. This consumption is 1.5% more than the RDN system average of 298.4 L/day/capita for 2008.

## 7. Maintenance Program

Regular maintenance and inspections are completed around the wellhead areas to reduce or eliminate the risk of contamination and system failure. Watermains are flushed twice annually; in the Spring and Fall. Annual fire hydrant maintenance is completed in the Fall.

## 8. Water System Projects

### 8.1 2008 Completed Studies & Projects

- Completed a watermain replacement at 1225 Sunrise Drive.
- Replaced all facility signs.
- Began keyless door entry installation (card lock) at the Water Services field office, and all pumphouse sites.
- Re-keyed all gates and points of entry.
- Established electrical connections for the mobile generator at key sites.
- Completed 'B' fire hydrant maintenance.
- Completed semi-annual watermain flushing.
- Completed a comprehensive water conservation program (**Team WaterSmart**) from May to October.
- Initiated the WaterSmart school program in partnership with Nanaimo Recycling Exchange.
- Updated and improved the RDN **WaterSmart** website.
- Updated the Emergency Response Plan.
- Expanded the Operating Procedures binder.
- Completed the SCADA (Supervisory Control and Data Acquisition) Study.
- Completed the Innovative Water Supply and Re-Use study.
- Completed the *Action for Water* referendum process.
- Achieved Backflow Prevention Tester's Certification for 3 Operations staff.
- Created the Auto E-Message notification sign-up on the RDN website.

### 8.2 2009 Proposed Projects & Upgrades

- Establish the Drinking Water Protection Advisory Committee.
- Review the SCADA report and options for implementation.
- Complete the keyless door entry installations at all field sites.
- Commence the 2009 **Team WaterSmart** education program.
- Develop a rebate / incentive program.
- Develop the *Well Aware* well safety program.
- Convert two wells to observation wells.
- Install a stand-alone water sampling station.
- Install a new chlorine building.

### 8.3 2009 Proposed Studies

- Review water treatment costs for French Creek LSA.
- Complete the well re-development study.

## 9. Emergency Response Plan

The Emergency Response Plan (ERP) was reviewed and updated in 2008. A copy of the ERP is attached in Appendix C.

## 10. Cross Connection Control

A formalized Cross Connection Control Program was initiated in 2007. Cross connection controls in-place include dual check valves at each service connection, fire hydrant use permits, and water supply bylaws noting discontinued service if a threat to the water supply is perceived by staff.

In 2008, a review and comparison of successful cross-connection control programs in other small water systems nearby was undertaken. A database of commercial customers was set-up in order to keep track of the maintenance history of testable backflow prevention assemblies at each site. Three RDN Operations staff achieved Backflow Prevention Tester's certification.

The program in 2009 will include:

- A survey of existing and potential cross-connections,
- An audit of RDN-owned facilities in each water service area,
- The preparation of a draft bylaw to allow enforcement of the Cross Connection Control Program.

## 11. Closing

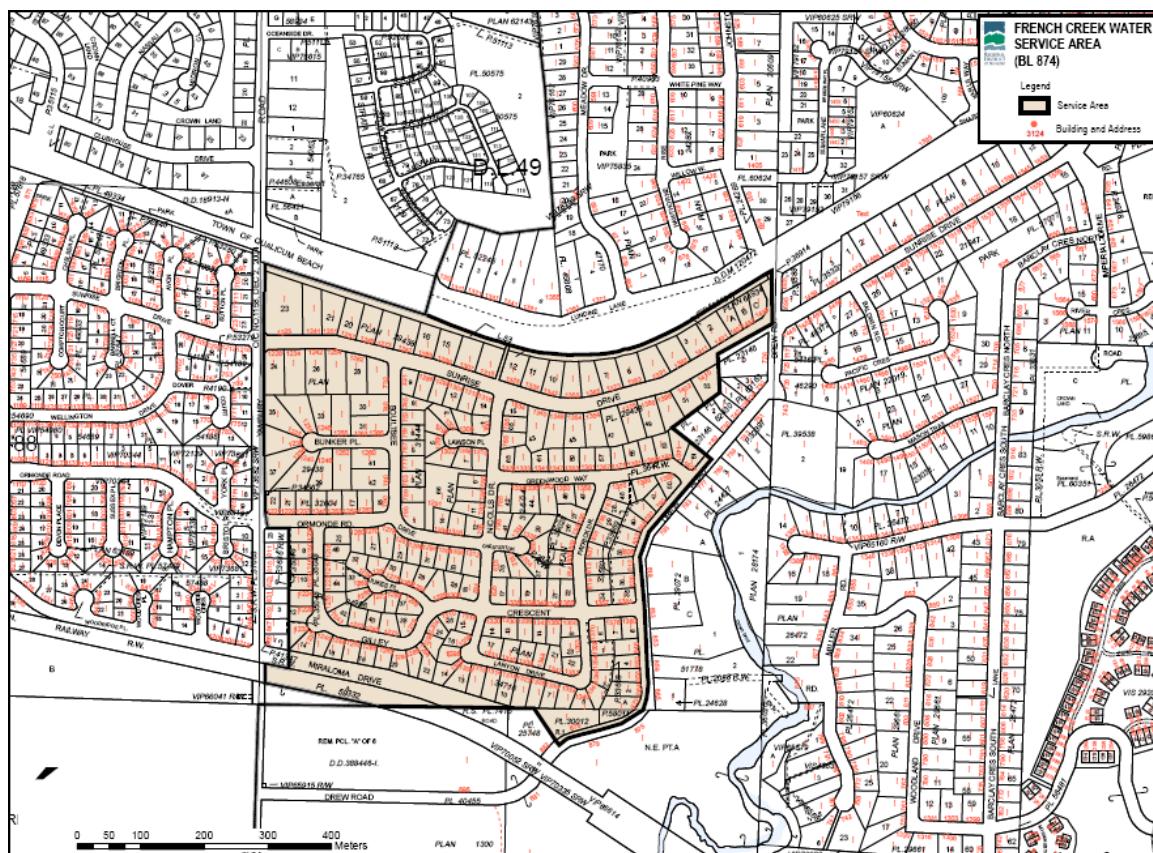

An annual report for the year 2009 will be prepared and submitted to the Vancouver Island Health Authority in the Spring of 2010. Annual reports are also available on our website at [www.rdn.bc.ca](http://www.rdn.bc.ca) in the WaterSmart section, under "Communities".

Note: Total coliforms can be an indicator of adverse water quality if the result in the re-sample is confirmed positive. (United States Environmental Protection Agency (EPA), 2008) RDN Water samples are always tested for Fecal coliform bacteria at the same time as Total coliforms to rule out the presence of harmful pathogens.

\*Resampled and had <1 for all Coliforms

Note: Total coliforms can be an indicator of adverse water quality if the result in the re-sample is confirmed positive. (United States Environmental Protection Agency (EPA), 2008) RDN Water samples are always tested for Fecal coliform bacteria at the same time as Total coliforms to rule out the presence of harmful pathogens.

\*Resampled and had <1 for all Coliforms

Note: Total coliforms can be an indicator of adverse water quality if the result in the re-sample is confirmed positive. (United States Environmental Protection Agency (EPA), 2008) RDN Water samples are always tested for Fecal coliform bacteria at the same time as Total coliforms to rule out the presence of harmful pathogens.

\*Resampled and had <1 for all Coliforms

## French Creek Well #7 Water Analysis Results

### Canadian Drinking Water Guidelines Package

Note: Total coliforms can be an indicator of adverse water quality if the result in the re-sample is confirmed positive. (United States Environmental Protection Agency (EPA), 2008) RDN Water samples are always tested for Fecal coliform bacteria at the same time as Total coliforms to rule out the presence of harmful pathogens.

\*Resampled and had <1 for all Coliforms

Red font indicates non-compliance with Canadian Drinking Water Guidelines / BC Approved Water Quality Guidelines

Coliforms are measured in colony forming units (CFU) per 100 millilitres of water

\* Yellow Column Coliform tests are done by Health Department

Green tests are completed by RDN

### Comments:

Iron and manganese are found naturally in drinking water. Levels found in these samples are not a health concern.

Red font indicates non-compliance with Canadian Drinking Water Guidelines / BC Approved Water Quality Guidelines

Coliforms are measured in colony forming units (CFU) per 100 millilitres of water

\* Yellow Column Coliform tests are done by Health Department

Green tests are completed by RDN

### Comments:

Iron and manganese are found naturally in drinking water. Levels found in these samples are not a health concern.

Red font indicates non-compliance with Canadian Drinking Water Guidelines / BC Approved Water Quality Guidelines

Coliforms are measured in colony forming units (CFU) per 100 millilitres of water

\* Yellow Column Coliform tests are done by Health Department

Green tests are completed by RDN

### Comments:

Iron and manganese are found naturally in drinking water. Levels found in these samples are not a health concern.

|                | Minimum                      | 0                          | 0                          | 0                 | 0             | 10          | 6.8 | 0.11       | 136        | 0.1      | 288           | 0.07      | 0.148     |

Red font indicates non-compliance with Canadian Drinking Water Guidelines / BC Approved Water Quality Guidelines

Coliforms are measured in colony forming units (CFU) per 100 millilitres of water

\* Yellow Column Coliform tests are done by Health Department

Green tests are completed by RDN

### Comments:

Iron and manganese are found naturally in drinking water. Levels found in these samples are not a health concern.

## APPENDIX C

### EMERGENCY RESPONSE PLAN

\* Emergency Response Plan not included in Public Copy.
